

### NEXT GENERATION

Sapphire has the vigour of a young vibrant breed and establishes extremely well. **Sapphire soft leaf buffalo was bred in Australia from the older Australian variety of Sir Walter Buffalo turf.** Next generation Sapphire looks so much better and finer textured than other varieties. Sapphire is easily as good as any other Buffalo in performance. Sapphire - performance and good looks.

Sapphire (left) has a finer leaf in comparison to other Buffalo varieties (right)

### AUSSIE OWNED AND BRED

Sapphire was bred in Australia and first grown here. It is an overseas success as it didn't take long for America to realise how good this grass is. Over a thousand acres are now grown in the US. **Sapphire is the only Australian bred Buffalo to make it overseas.**

### WHY DOES IT LOOK BETTER?

**Watch the video with Nigel Ruck from the Garden Guru's to see how good Sapphire really is!**

[www.ozbreed.com.au/download/SapphireGGep8b.wmv](http://www.ozbreed.com.au/download/SapphireGGep8b.wmv)

Older generation Buffalo types are all course leaved and less attractive. The new breed Sapphire is beautifully fine textured, soft to walk on and side by side the next generation is a true stand out.

#### WINTER COLOUR

It is equal to or much better than all older Australian bred Buffalo's.

#### RECOVERY FROM WEAR

Sapphire has excellent wear tolerance with very fast recovery.

#### ESTABLISHMENT

The new turf is quicker to strike than the old generation, making Sapphire the safe choice.

#### OTHER QUALITIES...

**Hot weather tolerance:** Excellent tolerance. It thrives in hot, humid & desert areas.

**Cold tolerance:** Tested down to -10°C in Canberra.

**Shade tolerance:** Good. Tests have shown it is similar to other Buffalo varieties. Most Buffalo's are good in shade.

**Salt tolerance:** Similar to many other Buffalo's.

**Mowing height & frequency:** 35-45mm in full sun, 50-60mm in shade. Less mowing than Couch and Kikuyu, similar to most other Buffalo types.

**Use:** Residential and commercial lawns, parks etc.

**Root structure:** Deep rooted.

**Drought Tolerance:** Excellent once established due to its deep root system.

**Thatch:** Less thatch build up compared to most other Buffalo types.
